

Create Great UX - Include Single Page Apps

Summary

For web and mobile apps, the biggest driver of success is an engaging and simple user experience. Award winning trainer, Vic Cekvenich, will teach a New York City "advanced-beginner" class on creating your first Single Page App. This \$20 dollar class will focus on current best practices in beginning web development for a smoother user experience. You will practice these skills building your own app during the 4 hour course.

Description:

With over 20 years of software development and C level tech experience, Vic Cekvenich has always been at the forefront of development. With new improvements in HTML5 and CSS3, there are some subtle changes that can yield a drastically improved UX with increased performance. This class will be focused on advanced-beginners, teaching tips around CSS animations, Single Page Applications and how they navigate, and serverless data.

These skills will have any aspiring front end developer well on their way to building a complete and compelling application with only HTML, CSS, and JS.

Students should have some knowledge of HTML and CSS, and be prepared with a laptop ready for development during the labs.

Agenda

1. Setup
2. Example Application
3. **Lab 1: Single Page Application - Opening a View**
4. Form Demo
5. **Lab 2: Insert and Select Data without a Back End**
6. CSS Animations
7. **Lab 3: Navigation / Router**
8. Comparison
9. Advanced Review

About The Presenter:

Growing up, Vic wished for a computer, pretending a piano was a keyboard. Now he is a seasoned CTO and HTML5 software developer, client side interactive 'designer / programmer' and team builder. Early in his career he optimized code, then started mentoring, training, and

building and improving teams at companies including TiVo, Akamai, Vendio, and Rocket Ninja.
