LAB 3.a: Templates

In this lab, we will apply a templating library.
We will be using **List.js** but this is not an endorsement, just the one we chose this time.

1. Currently the view and data in the **app3.ts** file are 'hard coded' to sample fields.
2. The example **toDo.html** in the ROOT folder has working code to select 'all' todo items
3. In the **app3.ts** file grab the data from the select and map it to the template.

Lab 3.b: Classes

There is a class for FirstPg to forward to the listTmpl (the first view)

Make pg2 a class which will load view2
